Patent No. 6562958
GENERAL INFORMATION:
APPLICANT: GATY L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERBNCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04

GENERAL INFORMATION:
APPLICANT: MATC J. Rubenfield et al.
APPLICANT: MATC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-02-18

Sequence 21986, Application US/09252991A Patent No. 6551795

The present sequence represents a Mycobacterium tuberculosis protein. Products from the present invention, which describes protein fragments and nucleic acid fragments derived from M.tuberculosis, can be used in the detection of and prevention of mycobacterial infections. In particular, the proteins and nucleic acids can be used for the diagnosi of or vaccination against tuberculosis caused by M. tuberculosis, M. africanum or M. bovis

diagnosis

New isolated mycobacteria polypeptides and nucleic acids - used developing products for the diagnosis of or vaccination against mycobacterial infections, particularly tuberculosis.

                                                                                                       8
                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                       The invention describes a substantially pure immunogenic polypeptide CC fragment (I) from Mycobacterium tuberculosis that is able to evoke a CC protective immune response against infections by mycobacteria belonging CC to the tuberculosis complex. The invention provides a (1) fusion polypeptide comprising at least one polypeptide fragment (I) and at least CC one fusion partner; (2) a fusion polypeptide fragment comprising a T-cell epitope from M. tuberculosis protein ESAT-6, or MPT59 and a second CC different amino acid sequence from M. tuberculosis, and/or including a sequence which protects the first amino acid sequence from in vivo CC degradation or post-translational processing; (3) a nucleic acid fragment CC that encodes the above polypeptides. The polypeptides and nucleic acid complex the above polypeptides. The polypeptides and nucleic acid complex the polypeptides of and as antigens for convis. The polypeptides are also useful for diagnosing ongoing or previous sensitization in an animal with bacteria belonging to the cuberculosis complex. The invention also describes the use of CFP7A or CFP3A or a T-cell epitope of for the induction of a strong immune CC response in a mammal; use of CFP7B, CFP19 or MPT59-ESAT6 or a T-cell epitope of for diagnosis of TB in a mammal by performing a DTH type skin cest; use of CFP27, CFP10A, CFP16, CFP19, CFP23, CFP23A, CFP23B, CFP2B or a T-cell epitope of for the preparation of an immunological composition; and composition; and composition of a subunit vaccine

The present sequence is that of the Mycobacterium tuberculosis MTBN5 protein. This is 1 of 8 proteins, i.e. MTBN1-8 (see AAB1982-49), encoded by 8 open reading frames (see AAB9035-42) identified as being present in the genome of M. tuberculosis but absent from the genome of the BCG strain of Mycobacterium bovis. MTBN1-8 represent reagents that are useful in discriminating between M. tuberculosis and BCG and, in particular, for diagnostic methods which discriminate between exposure of a subject to M. tuberculosis and vaccination with BCG. The invention features these MTBN polypeptides, functional fragments of them, DNA encoding them, vectors, transformed cells, and diagnostic, therapeutic, and prophylactic
                                                                                                                                                                          Novel polypeptide encoded by open reading frames present in Mycobacterium tuberculosis genome and not by the BCG strain of M. bovis, useful as vaccine and for diagnosing tuberculosis infection.
                                                                                                                                                                                                                                                                                                                                                      04-MAY-2000; 2000WO-US012257
                                                                                                                                                                                                                                                                                                                                                                                                                                    Mycobacterium tuberculosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a novel method for identifying essential genes for survival or virulence of mycobacteria species. The method comprises aligning the genomic sequence of a first mycobacterium species on a genomic sequence of a second mycobacterium species and selecting a polynucleotide sequence that is highly conserved in both genomes with no counterparts in other bacterial genomic sequences and that corresponds to an essential gene for the survival or virulence of mycobacterium species. The method of the invention is useful for detecting M. tuberculosis or M. leprae infection. The method reduces the number of potential new targets and prevent mycobacterial diseases, particularly tuberculosis and leprosy. The present sequence represents a marker protein from Mycobacterium tuberculosis and Mycobacterium tuberculosis and the marker protein from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression co of the nucleic acid inhibits proliferation of a cell. Also included are: (Cl) a vector comprising a promoter operably linked to the nucleic acid concoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated colypeptide or its fragment whose expression is inhibited by the antisense concoding a polypeptide, (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibited by the proliferation or the activity of a gene in an operon required for containing the polypeptide; (6) inhibiting cellular contiferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway contained for cellular proliferation or the biological pathway in which a proliferation—required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Wang

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  88888888888888888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this catent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

products from the present invention, which describes protein frag-
and nucleic acid fragments derived from M.tuberculosis, can be use
the detection of and prevention of mycobacterial infections. In
particular, the proteins and nucleic acids can be used for the dia
of or vaccination against tuberculosis caused by M. tuberculosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated mycobacteria polypeptides and nucleic acids - developing products for the diagnosis of or vaccination aga mycobacterial infections, particularly tuberculosis.

                                                                                                                                                                                                         To the tuberculosis complex. The invention by my conditions of polypeptide comprising at least one polypeptide fragment (I) and at least cone fusion partner; (2) a fusion polypeptide fragment (I) and at least cone fusion partner; (2) a fusion polypeptide fragment comprising a T-cell cone fusion partner; (2) a fusion polypeptide fragment comprising a T-cell cone fusion partner; (2) a fusion polypeptide fragment comprising a T-cell cone fusion partner from M. tuberculosis, or MPT59 and a second cone degradation or post-translational processing; (3) a nucleic acid fragment cone degradation or post-translational processing; (3) a nucleic acid fragment cone useful as pharmaceuticals, for diagnosis of and as antigens for concination against TB caused by Mycobacterium tuberculosis, africanum or concination against TB caused by Mycobacterium tuberculosis, africanum or concination against TB caused by Mycobacterium tuberculosis, africanum or concination against TB in a manual for diagnosis of TB use of CFP7A or concepts. The polypeptides are also useful for diagnosis on going or concepts of complex. The invention also describes the use of CFP7A or concepts of for the invention also describes the use of CFP7A or concepts of for the invention also describes the use of CFP7A or concepts of for the invention and strong immune concepts of for diagnosis of TB in a manual by performing a DTH type skin concepts use of CFP2A, CFP3A, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B, CFP3B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
This invention relates to a novel method for identifying essential genes for survival or virulence of mycobacteria species. The method comprises aligning the genomic sequence of a first mycobacterium species on a genomic sequence of a second mycobacterium species and selecting a polynucleotide sequence that is highly conserved in both genomes with no counterparts in other bacterial genomic sequences and that corresponds to an essential gene for the survival or virulence of mycobacterium species. The method of the invention is useful for detecting M. tuberculosis or M. leprae infection. The method reduces the number of potential new targets and provent mycobacterial diseases, particularly tuberculosis and leprosy. The present sequence represents a marker protein from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying and selecting genes for survival or virulence of mycobacteria by a comparative genomic analysis of the sequences of Mycobacterium tuberculosis and M. leprae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mycobacterium tuberculosis. Mycobacterium leprae.

                                                             drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
Sequence 586 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Wang
